

Neurobotics™

The Future is Here. Real. Now.

CORPORATE PROFILE & COMPLIANCE STATEMENT

Company Overview

Neurobotics LLC is a deep-tech hardware and software research and development firm. We specialize in deterministic cognitive systems, combining neuroscience, computer science, and hyper-dimensional computing. Our primary directive is to design and manufacture advanced hardware and software in the form of circuit boards to be utilized in the control systems of robots, drones, industrial environments, and specialized military applications.

Target Markets & Client Base

Our technology is designed for high-performance, safety-critical environments. We are actively targeting three primary market sectors:

- **Federal Government & Research:** U.S. agencies including the Department of Defense (DoD), National Science Foundation (NSF), Defense Advanced Research Projects Agency (DARPA), and NASA.
- **Industrial Infrastructure:** The industrial energy sector.
- **Commercial Tech:** The commercial robotics and autonomous systems sector.

Government Contracting & Compliance Posture

Neurobotics LLC maintains strict adherence to domestic regulatory frameworks and national security priorities:

- **Grant & Contract Pathways:** We are actively approaching U.S. Government and Defense Department channels exclusively through established R&D grant frameworks (e.g., SBIR/STTR).
- **Subcontracting:** While currently operating as an independent R&D entity, our long-term strategic roadmap includes securing subcontracts alongside established U.S. defense prime contractors.
- **Foreign Military Compliance:** Neurobotics LLC does not, and will not, issue contracts to, or accept contracts from, any foreign military, foreign defense ministries, or foreign governments.

- **Security Clearances:** The company does not currently operate under government security clearances issued by the DoD or in connection with classified defense programs.

Quality Management & ISO Qualifications

ISO 9001:2015 Auditor Certification awarded to CEO/CSO Kenneth Renshaw, completed via the Peak Consulting Group in Santa Clara, California on July 12, 2016.

At Neurobotics, regulatory compliance and defense-grade quality assurance are not retroactive patches—they are engineered into our physical substrate and corporate structure from day one. To deliver autonomous systems capable of surviving extreme, off-grid environments, our internal operations must reflect the same uncompromising deterministic discipline as our hardware.

The following documentation outlines the formal Quality Management System (QMS) pedigree of our executive leadership. Included is the official **ISO 9001:2015 Auditor Certification** awarded to CEO/CSO Kenneth Renshaw, completed via the Peak Consulting Group in Santa Clara, California.

Having a chief architect formally trained to audit international quality standards guarantees that our engineering roadmap, supply chain logistics, and DevSecOps pipelines are built to pass enterprise-level scrutiny. Alongside the official certification, we have included authentic workshop audit tools and original handwritten framework notes from 2016. This documentation serves as a testament to the rigorous, hands-on methodology that fundamentally informs the "Zero-Trust" operational discipline Neurobotics utilizes today.

Kenneth Renshaw's workshop audit tools and personal handwritten framework notes from the 2016 certification training; private library of Kenneth Renshaw.

Kenneth Renshaw's workshop presentation workbook and personal handwritten notes from the 2016 certification training; private library of Kenneth Renshaw.
